

[User Sara]

Summary -

Sara showed great positivity towards the structure of the website, she tried all the functionalities & all of them are functioning properly. She has given us some great feedback that we can work on and speak to our client about.

Sara -

I first went on <https://rawbarbershop.herokuapp.com/home> on my iMac desktop and I had no issues with the website loading except for the burger menu on the top left had an issue where when I clicked on it, It would cover the register/login section. I tried uploading a photo to the Gallery, which opened another window & it successfully uploaded and showed me the photo in the gallery so that was good. Another issue that on my iMac Desktop, The Contact page form for emailing the company would not let me put a field in.

I opened up the website on my iPhone and I had the same issues as on my Desktop but everything else was working well.

So here are the issues I encountered

- Register/Login section covered by Burger menu, not clearly visible.
- The Contact page form for emailing the company would not let me put a field in.
